**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 11 and 21-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Oguchi (USP 6304912).

Oguchi discloses (Figs 1-46, col. 1, lines 9 to col. 70, lines 51) a method of determining a Layer 2 path (Fig 26, Ref DP1) between a source device (Fig 26, Ref H1) and a destination device (Fig 26, Ref H2) in a switched network (Fig 26) comprising steps of determining a Layer 3 path between the source device and the destination device, wherein the Layer 3 path comprises information identifying two or more Layer 3 devices (Fig 17, Ref SS1), determining a subpath for each contiguous pair of Layer 3 devices in the Layer 3 path (Fig 17, Ref SS2-4 used to determine a subpath between the adjacent layer 3 devices can be establish by layer 2 or not); and concatenating the subpaths to result in creating and storing information representing the Layer 2 path (Fig 17, Ref L2-reachable, if the L2 reachable, then storing the layer 3 address with layer 2 address in the routing table, See Fig 28).

***Allowable Subject Matter***

3. Claims 7-10, 17-20 and 23-25 are allowed.

Art Unit: 2665

4. The following is a statement of reasons for the indication of allowable subject matter:

As claims 7, 17 and 23-25, the prior arts fails disclose or make obvious to a method or system comprising the steps of determining whether any contiguous pair of Layer 3 devices has no subpath, concluding that there is no Layer 2 path when any contiguous pair of Layer 3 devices has no subpath, eliminating extraneous devices in the subpaths; and concatenating the subpaths to result in creating and storing information representing the Layer 2 path when each of the contiguous pairs of Layer 3 devices has a subpath within a structure of the claims.

5. Claims 2-6 and 12-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As claims 2 and 12, the prior arts fails disclose or make obvious to a method or system comprising determining a subpath for each contiguous pair of Layer 3 devices comprises the steps of determining a first interface on a first node of the contiguous pair that is connected to a second interface on a second node of the contiguous pair for a given subnet, and selecting a relevant VLAN between the first and second nodes of the contiguous pair based on the first and second interfaces, and gathering current spanning tree information for the relevant VLAN.

As claims 4 and 14, the prior arts fails disclose or make obvious to a method or system comprising determining a subpath for each contiguous pair of Layer 3 devices further comprising the steps of tracing a first path segment from a first node of the contiguous pair by following a spanning tree associated with a relevant VLAN for the contiguous pair to a root of the spanning tree; tracing a second path segment from a second node of the contiguous pair by following the spanning tree associated with the relevant VLAN for the contiguous pair to the root of the

spanning tree; and concatenating the first second path segments to result in creating and storing the subpath for the contiguous pair.

As claims 6 and 16, the prior arts fails disclose or make obvious to a method or system comprising concatenating the subpaths to result in creating and storing information representing the Layer 2 path includes the step of eliminating extraneous devices from the subpaths.

### ***Conclusion***
